

## Green Gilled Tubing Midge (with air bubble)

A must read is Larry Wegmann's article, [Midges](#). Larry has been growing midges in his home and his wife has not thrown him out yet. But in his study, he noticed that some of his midges were green.

Gills and air bubbles were noticed. Thus my imitation of that a Green Gilled Midge with Gills and an air bubble.

### Materials:

Hook: Tiemco TMC2499BL

Hook size: 16, 18, 20, 22

Glass Bead: Killer Caddis MDG Diamond (cc) color core

Gills: Glamour Madeira No. 8 Prism White

(or materials of your choice)

Thread: UTC 70 White and UNI-Thread Fl. Chartreuse 8/0

Head: Brass Bead Black Nickel 1.5mm or 2.0mm

Body: Stretch Tubing – Medium Fl. Chartreuse

## Tying Steps

Cut one side of the Madeira thread sorter or longer than the other side.

Tie the thread behind the bead to keep it in place and pushing against the thread and glass bead.

The gills are on the side of the midge. Separate the short and long threads and pull to the side. The gills is half the thorax but not larger than thorax.

Fishing Instructions: In Larry's article, he said, "she was high sticking and watching the contact of the leader with the water surface while at the same time watching for the erratic swimming motion or white mouth to set the hook." For details on midge fishing, see Dave Tucker's article Midge Fishing Techniques. You can also dead drift on a strike indicator.
