

Fly in my Email Dennis Stead

Sowbug (the lead Fly)

1/20/2019

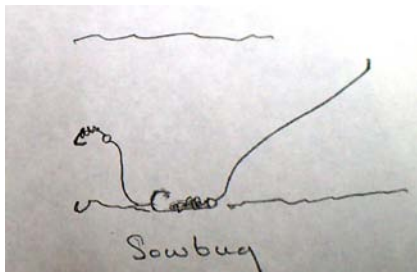

Remember my last fly in my email on the Sowbug. Well we finally finished the mold. The weight and look of the fly is the following.

Grooves added on the sides allow you tie on it.

Instead of using slit shots to get your fly to bottom, use this sowbug and tie your second fly off the sow bug hook. Now you might have twice the success of catching the fish.

I powder painting the Sowbug Green Pumpkin and epoxy on the under feather.

I use the fine under feather from a Pheasant or the under feather from a Turkey.

Then epoxy the inner feather.

Don't want to tie your second fly off the hook, then tie on an extender like this,

or tie on a braided like with a loop.

Here is the epoxy and braided line I used.

Because you now can tie on this Fly, add antennas and maybe rubber legs.

If you need to get your fly down on the bottom of a deep pool or fast moving stream this lead fly will do it.

What do you think? Let me know.
